

GEOS Safety and Response Announces Apple Watch Support

Group Safety Response App Now Supports Wearable Technology

Montgomery, Texas - May 6, 2015 - GEOS Safety Solutions, Inc. today announced the availability of support for the Apple Watch in Version 2.1 of their Enterprise Group Safety Response application. "Being the first to add Apple Watch support to our existing enterprise safety application was an important milestone for us," said Mark Garver, CEO. "Wearable technology is here to stay and nothing is more important than adding safety applications to it."

GEOS's solutions have saved over 4,000 lives since 2008 and are a critical element in the asset and personnel safety portfolio of hundreds of enterprises. The addition of support for Apple Watch is available in the GEOS Group Safety Response application, Version 2.1, which is available on the Apple App Store. In addition, to Apple Watch support, the GEOS application also now offers iBeacon support for improved Indoor Position Accuracy. Previous solutions were able to use Wi-Fi and GPS for providing location data, however GPS accuracy is better outside and not everyone has an open interface to Wi-Fi, in fact there are many locations that don't have Wi-Fi installed at all.

"We have always been at the technology forefront with regard to battery usage and position accuracy," commented Jim Hankins, Vice President of Technology. "We have supported the best solutions available, and beacons are truly where the future is going, and we are there today." The US Beacon Install base is predicted to grow at a staggering rate with some analysts predicting a growth rate of 287%. "Beacons being self-contained and battery powered are not subject to infrastructure or power outages," Hankins points out. "When you are in the safety and security market, you need to ensure the solution is always available and provide those layers of resiliency, which is precisely why we have invested so many resources in those areas," added Garver.

The GEOS Group Safety Response app is part of GEOS's ever-growing portfolio of solutions focused on personnel safety and asset protection. As the Internet of Things continues to grow, connecting people to assistance, regardless of the type of incident is becoming more critical, and GEOS is continuing to provide state-of-the-art resilient technologies to meet the demands of the critical infrastructure and key resources around the world.

About GEOS Safety Solutions, Inc.

GEOS Safety Solutions, Inc. is the only global provider of monitored safety solutions and is the de facto standard monitoring center for Satellite Based Notification Devices (S.E.N.D.), as well as numerous safety, security and alerting applications from our partners. GEOS provides these services through an indirect channel in support of our partners around the world. For more information about GEOS Safety and Response Solutions, visit www.geossafetysolutions.com
